Prelam Board

Prelam Board (AFP & HIGH GLOSS)

Prelam boards are MDF boards that have a decorative laminate surface attached to it. Adding such a decorative laminate over the board surface greatly increases its aesthetic value by making it look more attractive for the end-customer, also increases the board's resistance to moisture, and to wear and tear. Prelam Boards are mostly categorized into the two types listed below.

OSL: One Sided Laminate. In this case only one side of the particle board (the top surface or show surface) is laminated, while the other side is kept plain.

BSL: Both Sided Laminate. In the case of BSL, both the top and bottom surfaces of the Prelam boards are pre-laminated at the time of manufacturing. This also makes BSL costlier than OSL.

Short Cycle Process for Prelam Board

A short cycle lamination production line, that utilizes lower pressure press machines, is used for pre-laminating the MDF boards. A decorative paper impregnated (saturated) with melamine resin is pressed over the MDF board surface using press machines. By the addition of laminates, the otherwise plain MDF boards get adorned with colorful shades, designs, as well as textures. Stylam will be developing this Prelam boards in Hot Coating Process too which will give them High End Value by producing into both i.e. Anti-Fingerprint & High Gloss.

Applications/Properties

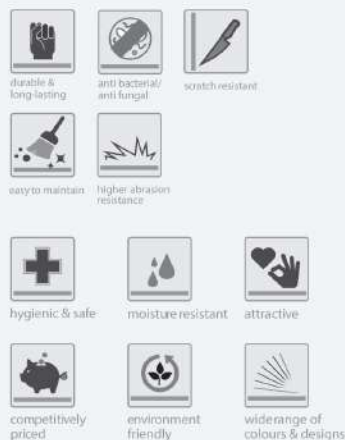

Pre-laminated boards have several end uses such as in the making of ready made furniture, kitchen cabinets, false ceiling, wall panels, partitions and other such applications.
